

# Care Coordination

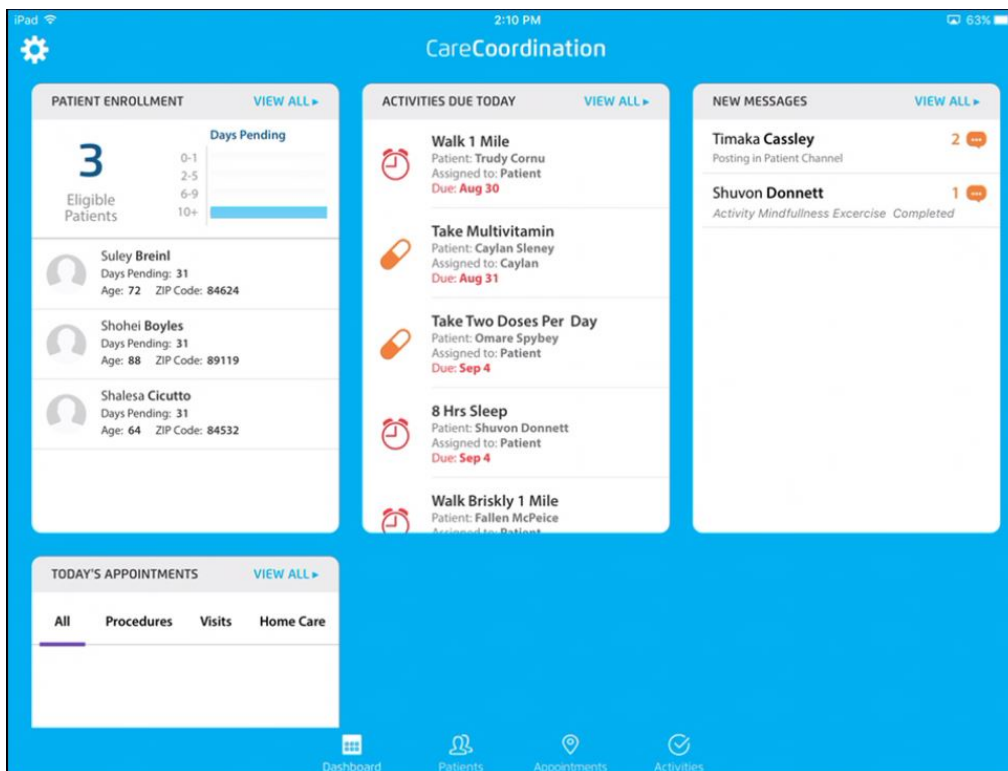

Mobile application for all members of a care management team

Type: Application

Status: Available

Revised: 2016-October-18

Care Coordination is a mobile, tablet based application, used at the point of care by care coordinators and team members to organize patient interventions including shared decision making for patient goals & activities, patient and team communications, as well as alerts and notifications for new admissions or decreasing patient engagement activity.

## Data Sources

- EMR
- Claims
- Patient lists from Patient Intake (workflow automation from 3 party systems and/or Health Catalyst® Patient Stratification application)

## Features

- Tablet application for mobile care team members (web application also available)
- Easily communicate with other care team members associated with a specific patient

## Care Coordination

- Receive notifications of important or critical patient events, such as readmissions
- Manage new patient assessments and program enrollment
- Organize daily patient care activities and interventions
